Task 1

Розробник з твоєї команди вніс певні зміни у функціональність платежів.

Склади 3 позитивних та 3 негативних тест-кейси на регресійне тестування програми для мобільного застосунку банкінгу (монобанк/приват24/інше).

Пригадай, регресійне тестування — це процес перевірки продукту, щоб переконатися, що зміни, внесені у код програми (наприклад, виправлення помилок або додавання нових функцій), не вплинули на роботу інших частин програми, які раніше працювали коректно. Тобто, це перевірка, чи не з'явилися нові проблеми після внесення змін у вже наявний функціонал.

Вибери мобільний застосунок банкінгу для тестування (монобанк/приват24/інше).

Склади 3 позитивних та 3 негативних тест-кейси на регресійне тестування програми для мобільного застосунку банкінгу, що ти обрав. Оформи у наданому шаблоні.

Дуже важливо 3 позитивних тест-кейси оформити в аркушах з назвами: "Positive Test-case 1", "Positive Test-case 2", "Positive Test-case 3". А 3 негативних тест-кейси оформити в аркушах з назвами: "Negative Test-case 1", "Negative Test-case 2", "Negative Test-case 3".

ID		Target Description:	Successful transfer of funds to a monobank card.			
Type	functional		**Priority:**	high		
Pre-conditions:						
1	The sender-user and the recipient-user are registered in the application.					
2	The sender-user and the recipient-user are authorized in the application.					
3	The Monobank mobile application is opened.
